RE: Reminder of Policy Requirements

Dear Policyholder

We would like to draw your attention to correspondence sent out previously by our office regarding Lightning/Power Surge Protection & Tracking requirements.

With summer and the festive season approaching, this letter serves as reminder to peruse through your policy schedule and wording to ensure that you comply with the necessary requirements under each section.

Lightning & Power Surge:

It is a requirement of all insurers to have **adequate Power Surge Protection installed in the main Distribution Board** that complies with SANS 0142-1 of 2008 regulations.

Available: https://pqrs.co.za/wp-content/uploads/2020/06/SABS-TC0067-SC06_N0120_SANS10142-1-2_ED1_TC0067_SC06_DSS_1.pdf

Tracking on Vehicles:

It's a general **REQUIREMENT** that any vehicle valued at more than R 200 000 to be fitted with a basic/passive tracking device from a reputable company.

In addition to above, take note that the following vehicles are deemed High Risk and must comply with your respective insurer's tracking requirements (Usually a "Dual Tracking device" consisting of EARLY warning PLUS a separate PASSIVE device will be required):

Directors: AJ Landman, M Sochen & H Rust

- Toyota Hilux / Fortuner / Prado / Land Cruiser / Quantum
- All Lexus Models
- All Ford Ranger Models
- Nissan NP200
- VW Polo & Golf

Should you require a tracking unit, we are able to request Tracker to get in contact.

If there's any uncertainty, please contact our offices, your accounts executive or underwriter.

Regards

Versaflex Team.
